

WASH

Our wash gun kits are compatible with most CNC machine tools and are supplied by Pumps and Equipment as a complete retrofit package. Each kit contains all the electrical and mechanical components required for installation. Units are available as standalone kits or can be fitted by our engineers upon request.

Available Models

WG-20

This model is equipped with a robust metal holster and a large-capacity wash gun. It is designed for environments requiring a heavy-duty cleaning solution.

WG-25

This streamlined version features a compact gun and a durable plastic holster, suitable for applications where a smaller profile is preferred.

Operation and Design

The system is fully automatic to ensure a seamless workflow. The delivery pump energises when the gun is removed from the holster, and coolant is discharged by depressing the trigger. For ease of use, the holster is typically positioned near the machine door so it remains within easy reach of the operator.

Customisation

The gun holster and pump plate can be finished in almost any colour to match your existing machinery. While standard kits are ready for immediate use, we can also provide bespoke pump plate modifications to meet specific requirements upon request.
